

Sika® Cleaner PCA

Cleaning pad and primer applicator

Typical Product Data

Base	Open pours, expanded melamine resin
Color	Light grey
Density	9.5 kg/m ³
Application method	Dry scrub or wet scrub with Sika® CleanGlass
Shelf life	36 months

Description

Sika® Cleaner PCA is a smart cleaning pad based on melamine foam. It is used for removal of contamination or cleaning of windshields and other surfaces. Additionally it can be used to apply Sika® Primer.

Areas of Application

Sika® Cleaner PCA is designed for the removal of contamination on ceramic frits or glass. It can also be used for the removal of label residues and other kinds of pollution. Sika® Cleaner PCA is well suited to apply Sika® Primers used in the Auto Glass Replacement business. This product is to be used by professional experienced technicians only.

Method of Application

To remove the contamination from windshields, use Sika® CleanGlass or an equivalent non antistatic glass cleaner to wet the surface and detect contamination. Start scrubbing with a Sika® Cleaner PCA the bond area. Always consider that it is designed for single use application only. Wipe the Sika® CleanGlass off and allowed the surface to dry completely before the next step in surface preparation is performed.

Industry

Important Note

Compatibility with the current substrate is to be verified prior to the application. Before applying Sika® Cleaner PCA to sensitive surfaces (e.g. plastics, etc.) it is recommended to test it on a small, possibly non-visible area of the base material.

Before the adhesive application the surface has to be pre-treated according to Sika's surface preparation recommendations.
